

Keep Productivity Moving —
With OfficeServ™ Mobility Solutions.

CONNECT WITH YOUR WORKSPACE ANYTIME, FROM ANYWHERE IN THE WORLD.

In today's age of round-the-world, round-the-clock commerce, the workday and the workspace are completely redefined. Employees need access to their office workstations whenever and wherever business calls. Competing and winning in this virtual environment once required massive investments in technology and infrastructure, so that only the largest and richest corporations enjoyed such communications muscle. But Samsung itself has redefined the game with its **OfficeServ™** family of telecommunications systems. Now, small-to-midsized companies as well can leverage the power of mobility. And that's the Samsung Advantage.

REMOTE IP PHONE

Technology for Telecommuting

With the Samsung Remote IP Phone, workers link via Internet to the corporate **OfficeServ** system and access all in-office communication functionality directly from home. Incoming/outgoing calls can be managed as easily and seamlessly as if the worker were at the office.

Samsung Remote IP Phones help:

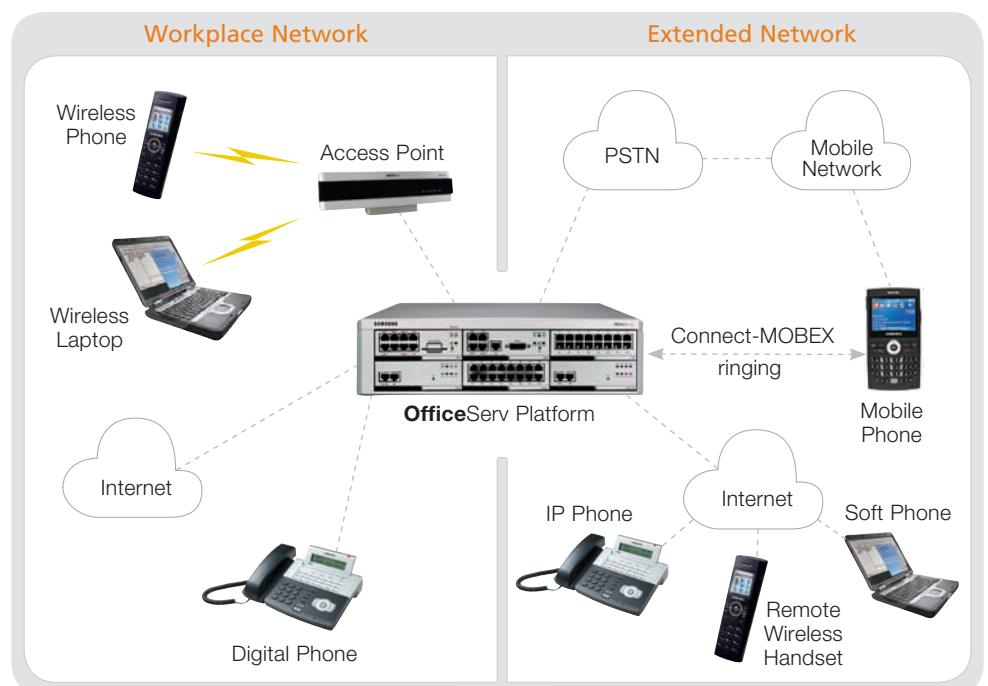

- Boost productivity and worker retention
- Stagger work schedules to accommodate individual and business needs
- Trim travel expenses
- Contribute to your business's "green" initiatives

OFFICESERV WIRELESS

Setting Productivity Free

While employees roam the facility throughout the day, the **OfficeServ** Wireless IP solution keeps them in touch with the world. By deploying 802.11 a/b/g wireless LAN access points throughout the building, Samsung's WiFi-certified mobile voice and data IP solutions ensure crystal-clear voice connections via **OfficeServ** wireless handsets — complete with menu-driven color display and speakerphone. On-the-go workers can also link wirelessly to essential business data from their PDAs and laptops. What does this mean for your business? Complete communications freedom — voice, data, wired and wireless all seamlessly and efficiently integrated. No missed calls. No missed opportunities.

OFFICESERV MOBILITY NETWORK

OFFICESERV CONNECT

Say Goodbye to Missed Calls

Some calls are too important to miss, expected or unexpected. That's why Samsung **OfficeServ** Connect — available in a variety of configurations — is a powerful mobility solution. The **OfficeServ** platform comes standard with **OfficeServ** Connect, which allows incoming calls to an office phone to be set to ring simultaneously at up to five additional locations (mobile phone, home office, alternative office, workshop, etc.) whenever that worker is away from the office. This is commonly known as “twinning,” and when one device answers, the others stop ringing. Employees won't miss calls, and there's no need to give out personal cell phone numbers anymore.

OFFICESERV CONNECT WITH EXECUTIVE MOBEX

Your Virtual Office Phone

Add an Executive MOBEX* (Mobile Extension) license to **OfficeServ** Connect, and your remote phone now operates as a fully functioning office handset — transferring, conferencing, holding, and paging like any other in-office phone.

HOT DESKING CAPABILITIES

Cut Costs with Workstation Sharing

As budgets get tighter, space, resource, and equipment utilization become paramount concerns. This is why our IP Keysets support cost-effective hot desking capabilities. Users on the same workstations can retain individual phone numbers, speed dials, preprogrammed buttons, and voicemail. Email and Instant Messaging services can also be routed to any location on the network. This enables workers to utilize workstations left temporarily vacant by vacationing or traveling employees, allowing you to optimize idle space and resources throughout the company.

What's the business advantage of all this mobility? Confidence, convenience, and control. One common number reaches the intended party. To keep your company in step with the pace of big business today, deploy powerful, dependable, and surprisingly affordable Samsung **OfficeServ** mobility solutions. Learn how to make your move by contacting your Samsung Business Communication Systems dealer today.

OFFICESERV SOFTPHONE

Whenever, Wherever Access From the Road

The Samsung **OfficeServ** SoftPhone is a Windows-based application that turns the laptops of your road warriors into full-featured Samsung IP phones when linked via Internet to the corporate network.

Features include:

- A complete set of **OfficeServ** telephone features
- Familiar interface that captures the functions of a large display phone
- True voice and data convergence using a single device
- Message notification and voice mail access
